# No More Fake Punches – Face Recognition with Anti-Spoofing Technology

## Anti-Spoofing

The system uses AI algorithms to detect and block spoofing attempts like photos, videos, or 3D masks, ensuring only real human presence is accepted.

## Liveness Detection

Facial recognition includes real-time liveness checks (like blinking, head movement, depth analysis) to verify that the person is physically present.

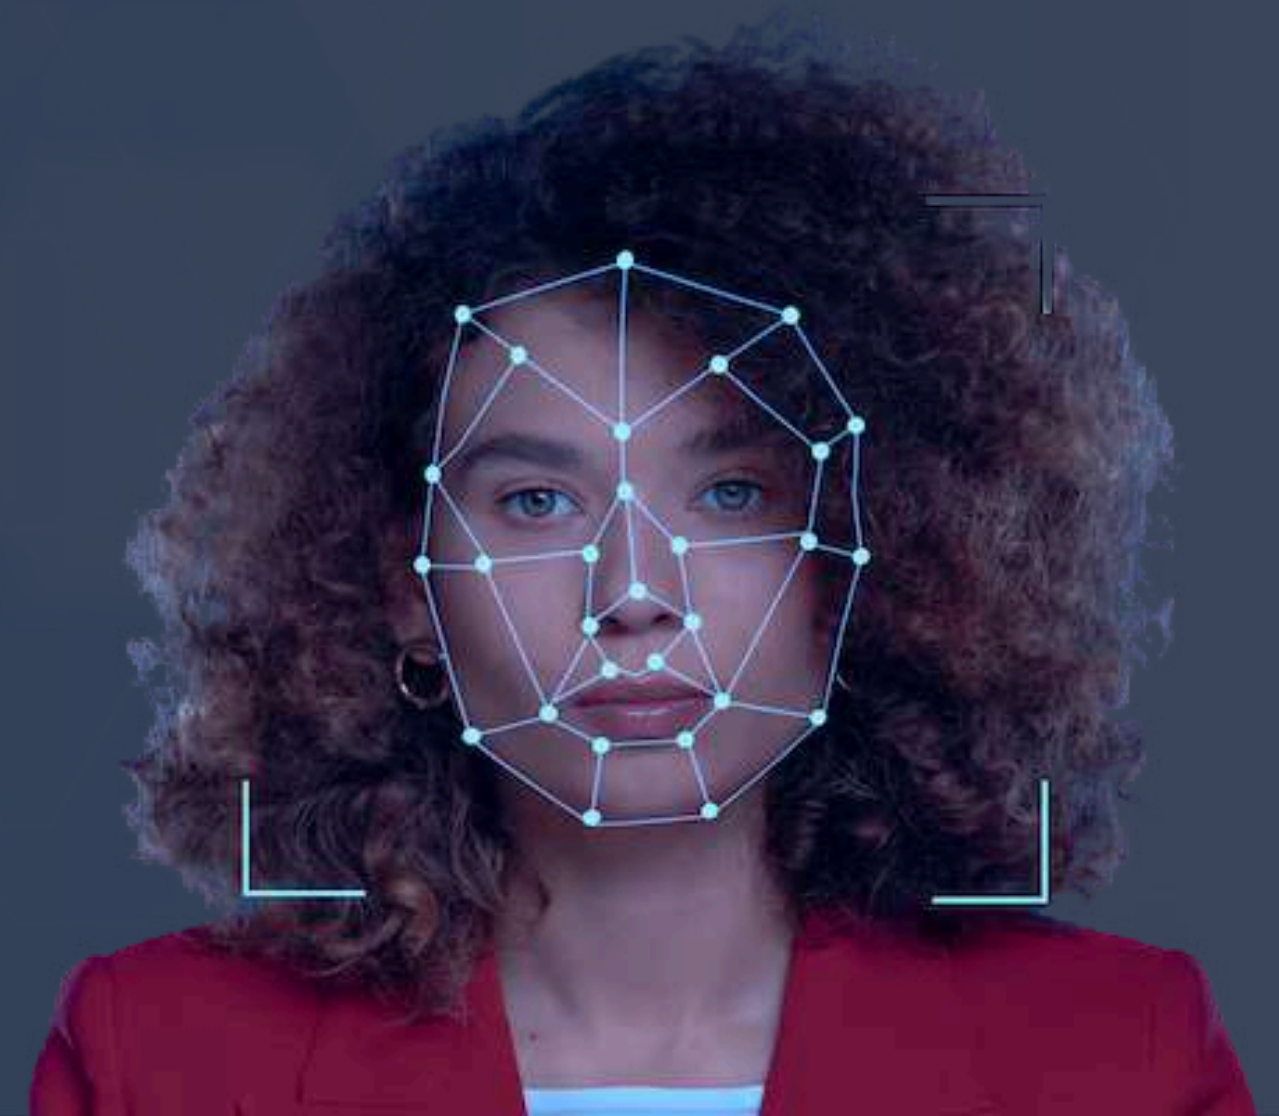

## Secure Attendance Punching

No fake punches or proxy attendance is possible—each punch is verified against live facial data, preventing misuse through pre-recorded media.

## AI-Powered Accuracy

Advanced AI ensures high precision and quick face detection under various lighting and environmental conditions, reducing false positives.

AI FACE RECOGNITION | SMARTOFFICE

# No Network? No Problem! Local Authentication is Here

## Offline Punch Capability

Punch attendance even without internet—no network required at the time of entry or exit.

## Automatic Sync with Server

As soon as the device reconnects to a network, all offline punches are auto-synced to the software in real time.

## No Data Loss

Punch data is securely stored in the device during offline mode, ensuring zero data loss.

## Seamless User Experience

Employees can punch without worrying about connectivity, ensuring uninterrupted attendance tracking.
